

Geneva Motor Show Preview: The BRABUS G V12 S Biturbo Mercedes-Benz G-Class

If you're in the mood for a bit Mercedes tuning action, you're in luck ladies and gentlemen, because that's exactly what we have for you this morning, starting with the insanely powered BRABUS G V12 S Biturbo. Based on the Mercedes G-Class, BRABUS engineers turned the legendary SUV into an all-out monster, shoehorning the V12 Biturbo currently found in the S600 into the model's engine bay, then increasing its displacement from 5.5 to 6.3 liters. The end result is a G-Class packing 700 horsepower (690 bhp) / 515 kW along with 1,320 Nm of torque. That's enough to propel the G V12 S from 0-62 mph in 4.3 seconds before hitting its top speed of 163 mph (it's limited to 150 mph, however).
